

The Ultimate Solutions for Satellite Communications

Key UltiSat Benefits:

- True global networking via satellite.
- Client-focused program management.
- Experience in design, building, and operating any satellite communications product or service.
- Technology to IP-enable legacy networks.
- Extensive regulatory and licensing expertise.
- Support on any land mass, island, remote or harsh territory, and maritime vessels.
- Multiple contract vehicles including GSA SATCOM-II.
- 24x7x365 network operations.
- More than 30 years of industry knowledge and project experience.

Global Communications

From Greenland to Antarctica, the Galapagos Islands to atolls in Micronesia — and every major landmass in between — UltiSat delivers advanced satellite and wireless networks that solve complex global connectivity requirements.

Providing powerful, secure, and reliable broadband communications UltiSat operates cost-effective customized networks that range from a single connection to hundreds of terminals on different continents. Solutions offered include both point-to-point links and multipoint global networks for military, government, NGO, telecommunications, ISPs, and corporate customers around the world.

Special Expertise

Southwest Asia, Africa, Europe, AOR, IOR Coverage

Focusing on “hot spots” such as Southwest Asia, the Middle East, and Africa, UltiSat specializes in providing robust, reliable, and secure services for satellite systems in challenging environments.

Offering systems design and engineering, satellite network, and teleport services, UltiSat solutions range from instantly deployable “office-in-a-box” products to large antenna earth stations.

UltiSat has extensive experience with host-nation approvals, telecom licensing, and associated regulations. UltiSat’s Danish teleport accesses satellites from 60°W to 80°E and serves as UltiSat’s gateway into Europe, Southwest Asia, the Middle East and Africa.

Past Performance

- Designed, installed, and operates the world's most diverse satellite network of more than 250 sites in approximately 100 countries on all continents, including many remote islands.
- Installation, operation, and maintenance for hundreds of terminals in Africa.
- Global networks for NATO countries and European embassies.
- C- and Ku-band teleport infrastructure for US DoD.
- Voice and data gateways for major telecommunications operators and service providers.
- Rapid-deploy terminals (flyaway, transportable) provided to first responders and warfighters.
- Maritime deployments in all three major ocean regions (AOR, IOR, POR).
- Large-antenna design and installation for ISPs.
- Support for government contractors serving the US military around the globe.

Teleport Services

Through its teleport in Denmark, facilities in the US, and extensive access to Tier-1 multigigabit fiber links, UltiSat offers end-to-end network provisioning and management as well as teleport services for C and Ku bands. Reliable, 24x7 network management, performance measurement, diagnostics, and multilingual help desk, combined with modern facilities, premium coverage, and system redundancy, ensure trouble-free communications around the globe.

VIPnet

UltiSat is a recognized leader in the design and deployment of VSAT networks providing connectivity to and from the world's most remote locations. Whatever your requirements, from mission-critical voice and data communications across continents to morale-boosting Internet connectivity, UltiSat's VIPnet provides the best options for private and secure satellite network services. UltiSat provides a premier turnkey service for VSAT networks and manages all services from design and installation to space-segment and fiber acquisition to ongoing operations, monitoring, and maintenance.

Systems Design and Integration

With customers ranging from large enterprises with global operations to military clients in war zones, UltiSat systems experts not only offer VSAT network design and implementation, but also design, deployment, and system integration of satellite ground stations. Building on decades of experience successfully managing and implementing complex satellite-communications projects, UltiSat offers the full range of lifecycle support activities to enable mission-critical communications.

VIPsat

UltiSat offers a wide range of voice, video, data, and IP services on small, lightweight, and powerful devices that offer simultaneous voice and data as well as allow interoperability between terrestrial, cellular, and satellite systems. Using portable systems that can be mounted on ships, airplanes and automobiles, or handsets that operate like a regular phone, UltiSat provides flexible and powerful mobile satellite services around the globe.

VIPkit

A carry-on kit that provides phone, email, and Internet access, VIPkit is a fully integrated solution for first responder, public-safety and battlefield communications applications. Leveraging the Inmarsat BGAN service and advanced applications, VIPkit is a rugged, easy-to-use, and rapid-deploy solution that meets all communication needs whatever the local infrastructure.
